

CaseBook — Technical Roadmap

PRODUCTION SAFE

Step-by-Step Tab-Based Modularization (Zero-Risk & Crash-Free Architecture)

🎯 Goal & Core Objective

Currently, `admin.html` (6,400+ lines) and `admin.js` (21,000+ lines) are large monolithic files. Every time an agent or developer edits a single tab, reading thousands of lines is slow and consumes excessive context tokens.

Solution: Safely split the project tab-by-tab into small, modular files (e.g. `components/tabs/paisa/paisa.html` ~300 lines) so changes happen in seconds with **zero crash risk** on GitHub Pages.

PHASE 0 Git Safety Net & Preparation

1 Create Isolated Git Test Branch

Run `git checkout -b modular-tabs-test`. All experimental work happens in this sandbox. The live `main` branch remains 100% frozen and untouchable.

2 Setup Clean Modular Directory Structure

Create a dedicated folder `components/tabs/` for individual isolated tab templates.

Instant Rollback Guarantee: If anything feels wrong at any point, running `git checkout main` restores the entire project in 1 second with zero loss.

PHASE 1 Pilot Canary Test (Sirf 1 Tab: Paisa Tab)

3 Extract Only '#paisa' Tab HTML

Move the 350 lines of Paisa tab markup from `admin.html` into `components/tabs/paisa/paisa.html`.

4 Add Safe Fallback Tab Loader in `admin.js`

Add a lightweight, 8-line browser-native loader. When the user taps "Paisa", it fetches `paisa.html` only once and caches it. **No npm, no bundler needed on GitHub Pages!**

5 Comprehensive Verification Check

Verify that balance calculations, sparkline charts, Transfer In / Spent buttons, and modals function with 100% precision and zero console errors.

PHASE 2 Review, User Sign-Off & Migration Schedule

Order	Tab Name	Original Location	Target Component	Status
Test 1	Paisha (Expenses)	admin.html (~L2794-3160)	components/tabs/paisha/paisha.html	Ready to Start
Step 2	Tasks / To-Do	admin.html (~L1500-1900)	components/tabs/todo/todo.html	Pending Pilot
Step 3	Cause List / History	admin.html (~L2100-2600)	components/tabs/causelist/causelist.html	Pending Pilot
Step 4	Home Dashboard	admin.html (~L380-1200)	components/tabs/home/home.html	Final Step

💡 **Strict Rule:** Hum tab-by-tab challenge. Jab tak ek tab completely test aur pass nahi hota, agla tab start nahi karenge.
